

YASHWI BHATT

Gandhinagar, Gujarat, India | [+91 6354266233](tel:+916354266233) | bhattyashwi@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Portfolio](#)
AI/ML Engineer · Data Scientist · Software Development Engineer

EDUCATION

B.Tech, Computer Science Engineering — LJ University, Ahmedabad
CGPA: 9.42/10 (Sem 1: 9.25 · Sem 2: 9.19 · Sem 3: 9.83)

2024 – 2028

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

ML / Data Science: Scikit-learn, TensorFlow/Keras, XGBoost, LSTM, Prophet, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit, Jupyter

Web & Backend: Django, Django REST Framework, Node.js, Express.js, React.js, REST APIs, HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: MySQL (JDBC), SQLite, MongoDB (Mongoose)

Tools & Practices: Git/GitHub, Postman, VS Code, Anaconda, Google Cloud & OAuth 2.0, Agile/Scrum, OOP, DSA, DBMS

Problem Solving: 75+ LeetCode problems solved · 670+ GitHub contributions

EXPERIENCE

AI Engineering Intern | *Narvix Tech*

2 Months

Project: Google Business Profile (GBP) Audit Engine — POC | Python, Google Cloud, OAuth 2.0, GBP API, Schema.org

- **Designed a deterministic audit rules engine** encoding a 9-lever GBP audit checklist with PASS/WEAK/FAIL/SKIP logic, turning a subjective SEO audit process into a repeatable, rule-based system with prioritized findings.
- **Built a modular, read-only GBP data pipeline** (authenticated OAuth 2.0 HTTP client with retry/pagination, fetchers, normalizers, JSON serialization) integrating 4 live Google Business Profile APIs (Q&A, Reviews, Photos, Posts) and handling API failures/deprecations gracefully.
- **Engineered a NAP consistency checker** using Schema.org JSON-LD extraction and field-level normalization/comparison, closing a key data-accuracy gap between a business's website and its GBP listing.
- **Centralized the audit workflow** into a single automated entry point spanning fetch → rules evaluation → NAP check → Markdown report generation, replacing a manual, multi-step audit process; authored the project Knowledge Base and ADRs and wrote unit/integration/live tests.

PROJECTS

BitVision — AI-Powered Bitcoin Price Prediction & Analytics Platform

github.com/bhattyashwi14/bitvision

React · Django REST Framework · Scikit-learn · XGBoost · Prophet · LSTM

- **Built the end-to-end ML pipeline** on Bitcoin price data (2014–2026) — preprocessing, feature engineering, and training/comparison of 4 models (Random Forest, XGBoost, Prophet, LSTM).
- **Led integration across the React frontend, Django REST backend, and ML modules;** built/integrated APIs for predictions, model comparison, feature importance, backtesting, and OTP, resolving cross-module bugs and API/data inconsistencies.
- **Converted Prediction, Models, Analytics, and Dashboard features from hardcoded/demo values to real backend-driven data** (predictions, confidence, signals, technical indicators, model metrics, backtesting, live BTC/INR prices); added OTP auth, trade history, price alerts, and dark-mode fixes.

Netflix Content Analysis — Exploratory Data Analysis

github.com/bhattyashwi14/netflix-content-analysis

Python · Pandas · NumPy · Matplotlib · Plotly

- **Performed EDA on 8,000+ Netflix titles**, cleaning and structuring raw metadata to analyze content growth over time, Movies vs. TV Shows split, genre distribution, ratings, and top content-producing countries.
- **Built visual, data-driven narratives** with Matplotlib and Plotly to surface trends and patterns, translating exploratory analysis into clear, actionable insights.

SkillLink — Full-Stack Skill Exchange & Hiring Platform

github.com/bhattyashwi/SkillLink

Python · Django · SQLite · OTP Email Auth · Role-Based Access Control

- **Built a multi-role platform** (Learner, Tutor, Client) with OTP-based email verification, fully separate permission-scoped dashboards, and a slot-booking system with automated email confirmations.
- **Built a post-session rating system** that dynamically updates tutor search rankings in real time, plus a live-database chatbot running real DB queries (not static FAQ) for skill discovery and status checks.
- **Structured the hiring workflow** with Django ORM-backed status tracking for client requests and tutor accept/reject actions. Showcased at Innovation Village, LJ University.

Reflecto — Console-Based Personal Productivity App

github.com/bhattyashwi14/Reflecto

Java · MySQL · JDBC · Custom Data Structures · Stored Procedures

- **Architected a modular Java application** with five independent, interoperable components (Journal, To-Do List, Challenges, Posts, User Auth), built on three custom data structures from scratch (Singly Linked List, Stack, Deque) without relying on Java Collections.
- **Engineered a custom exception framework** (LengthException, DigitException, EmptyDataException) and integrated MySQL via JDBC using CallableStatement (stored procedures) for all CRUD operations.

CERTIFICATIONS

Introduction to Java Programming — Coursera · Inheritance & Data Structures in Java — Univ. of Pennsylvania · Intro to HTML, CSS & JavaScript — IBM · Exploratory Data Analysis for Machine Learning — IBM · Agile Scrum in Practice, High Impact Presentations, Email Writing, Time Management — Infosys Springboard · Web3 & Rust Foundations — Arbitrum Builders Lab

HACKATHONS & EVENTS

Hackovate (LJ University) · Bit & Build (Google DSC) · LDCE Hackathon (qualified round) · OdoO Hackathon · eRakshak Cyber Security Hackathon · Innovation Village — presented SkillLink to an industry panel. Workshops: Devolution (DA-IICT), JUG-GUJ Java Community Day, HexHunt, Blockchain (Arbitrum Builders Lab).
